Client Memory

A heatmap illustrating response patterns across 9 cores. The vertical axis on the left lists cores 1 through 9. The horizontal axis is divided into three main sections by vertical black lines: a yellow section (cores 1-3), a pink section (cores 4-6), and a light purple section (cores 7-9). Within each core's row, there are several smaller vertical grid lines, creating a fine-grained structure. In the yellow section, the first few columns are yellow, followed by a transition to pink. In the pink section, the first few columns are pink, followed by a transition to light purple. In the light purple section, the first few columns are light purple, followed by a transition back to pink. The labels "Resp1" and "Resp2" are positioned at the top right of the pink and light purple sections, respectively.
